

Harpeth Trace Estates - Service Request to Sprout Landscaping

Harpeth Trace seeks expedited removal of hazard limbs and trees along Harpeth Trace Drive and side streets (extent in red) and in HT managed areas (in green) adjacent to the Sprout Landscaping focal areas. The project extent also includes Harpeth Trace Drive through condominiums and Harpeth Trace Summit. Phase 1 work would prioritize removing snags, widowmakers, barriers to roads or trails (including low overhanging branches in the right-of-way), threats to utilities, and other hazard trees identified by the arborist on HT managed areas. Phase 2 would remove any additional downed woody debris within the project extent. The project area omits the stretch of Harpeth Trace Drive (and managed areas) from the HT entrance on Hwy 100 to the intersection of Harpeth Trace Drive at the Upper Harpeth Knoll Condos at approximately 36.0758, -86.8945 or 772 Harpeth Trace Drive, which is expected to be handled by a separate service provider.
